Thunderstorm Wind (EG 58 kt)

A few trees and power lines were blown down.

On the afternoon of July 30th a strong upper disturbance moved over the region and combined with deep moisture, moderate instability, and unseasonably strong winds aloft. The combination of these features caused an organized severe weather outbreak which produced widespread thunderstorm straight line wind damage. Some of the hardest hit areas included locations across Carroll, Grenada, Montgomery, and Leake Counties. Here, widespread trees and power lines were blown down.
